

To whom it may concern,

This letter of recommendation is to verify that the student, Mohammad Mehrani, is highly qualified to continue his education as a Master's student. I became acquainted with Mohammad during his education at the Faran Mehre Danesh university. when he took the courses "Android Development Programming" and "Cloud Security" with me. Mohammad always tried to engage in class discussions either by answering or asking questions. He got the highest mark among his classmates. And according to his GPA, he was also among the top students in the Information Technology department.

Mohammad fulfilled his Bachelor of science thesis "Artificial Intelligence" under my supervision, in which he could indicate the connection between his creative idea by using modern concepts of natural language processing and neural machine translation method. Having both discipline and motivation in his work, he was overcoming facing new challenges. During his research for the B.Sc. thesis, not only was he making a sturdy effort to accomplish his duty, but he also was studying effectively for several hours every day. Throughout this time, I found Mohammad an intelligent and hardworking student.

Concisely, Mohammad's intelligence, productive behavior, and perseverance are priceless, so I wish we had enough resources to keep him here. But I really like to see him in a better position. Hence, he left me with no hesitation to highly recommend him without any reservation.
